Web Development Internship - Task 1 Submission

Soumen Das

November 13, 2025

Task Details

Task: Create a Simple Responsive Landing Page Using HTML & CSS.

Submission

This document accompanies the HTML and CSS file created for Task 1.

- **File Submitted:** `task-1-landing-page.html`
- **Objective Met:** A clean, responsive landing page was built.
- **Features Included:**
    - A header with a logo and navigation links.
    - A hero section with a heading, paragraph, and call-to-action button.
    - A footer with social media links.
- **Tools Used:**
    - HTML5 for structure.
    - Tailwind CSS (in a `<script>` tag) for styling and responsiveness, as a modern alternative to a separate `style.css` file.
    - Flexbox and responsive prefixes (e.g., `md:`) were used for layout and to ensure responsiveness on different screen sizes.

Outcome

The task requirements were met, demonstrating an understanding of HTML structure, CSS layout (using Flexbox), and media queries (handled by Tailwind's responsive utilities).
